

THE OPPORTUNITY

Turn a promise into a funded fix.

Issue boards describe work. Funding and completion evidence often stay in separate conversations.

For contributors

See a committed budget before starting.

Anchor a proof of work by hash.

Receive payment after two approvals.

For sponsors

Lock funds against a specific task.

Use independent reviewers.

Recover unsettled funds after expiry.

THE WORKFLOW

Escrow. Evidence. Consensus. Payout.

01

Open

Sponsor locks demo ETH
with a task hash.

02

Submit

Worker commits evidence
by its Keccak-256 hash.

03

Review

Two distinct reviewers
approve one time each.

04

Settle

Contract pays worker or
refunds after expiry.

Smart-contract rules enforce the settlement; the interface displays the resulting transactions and balance.

Real local transactions. Honest scope.

Built and verified

Solidity + ethers v6 + Ganache

Node.js + semantic browser UI

Payout and refund integration tests

Next steps

Wallet-signed public testnet

Durable task and evidence links

Dispute process + contract audit

This MVP runs only on an ephemeral chain. Demo ETH has no real-world value; no public deployment or audit.

Developed with Codex assistance. Source and reproducible local run instructions are in the public repository.
